/note="Organ: Upper Head; Vector: pYX-Asc; Site_1: ECOR I; Site_2: Not I; The library was constructed according Bonafo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarcse gel First strand CDNA synthesis was primed with oligo-dT primer containing a Not I site .Double strand CDNA was size selected according to mRNA size fraction, ligated with ECOR I adaptor, digested with Not! and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CGAACTGAAT. This library kas created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH)."

/tissue type="whole brain"
/dev stage="1,5, and 15 days newborn"
/dev stage="1,5, and 15 days newborn"
/dob hote="While III phage resistant)"
/done lib="NIH BMAP GVO"
/done lib library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand CDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand CDNA was
size selected according to mRNA size fraction, ligated with
ECOR I adaptor, digested with NotI and then cloned
directionally into pYX-Aso vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTGAAT. This library was created for the University
lows Brain Anatomy Project (BMAP): "Gene Discovery in the
Developing Mouse Nervous System", supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
program coordinator."

Tissue Procurement: Richard M. Harland Laboratory, University of

California, Berkeley; http://tropicalis.berkeley.edu/home

CDNA Library Preparation: Richard M. Harland Laboratory, University
of California, Berkeley

DNA Sequencing: DoB Joint Genome Institute: http://www.jgi.doe.gov

Clone Distribution: L.M.A.G.E. Consortium/LLNL:

http://image.llnl.gov

Naming Conventions: EST name is generated by the concatenation of

the UGI Clone Id and the direction of sequencing. The suffix '.fwd'

indicates a forward sequencing read of the insert.

Small Insert: Based upon one or more sequencing reads of this clone

where vector sequence was present at both ends, this clone has been

determined to contain a cDNA insert on the order of 600-1000 bases.

High quality sequence stop: 544.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /clone_lib="NIH_XGC_tropTad5"

Site 2: Not1; This normalized library was constructed from Site 2: Not1; This normalized library was constructed from site 2: Not1; This normalized library was constructed from lamilion independent clones. cDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand strand synthesis reaction. Following this first strand reaction, double-stranded cDNA was blunted, ligated to Not1 adapters, digested with EcoRI, size-selected, and cloned into the NotI and EcoRI compatible sites of a custom modified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridization was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DR123141

/note="Organ: Eye; Vector: pXX- Asc; Site 1: EcoR I;
Site 2: Not I: The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcse
gel.First strand cDNA was size fractionated on a 1% agarcse
gel.First strand cDNA was synthesis was primed with Oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction ,ligated
with EcoR I adaptor , digested with NotI and then cloned
directionally into pXX-Asc vector . The library tag
sequence located between the Not I site and the polyA tail
is TAATTGAAGT. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH)."

GENERAL INFORMATION
APPLICANT: Susan G. Stuart
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF BLOOD CELL GENE
TITLE OF INVENTION: EXPRESSION
TITLE OF INVENTION: EXPRESSION
TOWNESSEE: INCYTE PHARMACEUTICALS, INC.
STREET: 3144 PORTER DRIVE
CITY: PALO ALTO
STATE: CALIFORNIA

SEQUENCE CHARACTERISTICS:
LENGTH: 4145 base pairs
TENGTH: 0416 base pairs
TYPE: nucleic acid
STRANDEDNES: double
TOPOLOGY: linear
MOLECULE TYPE: CDNA
DESCRIPTION: Human Hepatocyte Inducible Nitric Oxide
DESCRIPTION: Synthase CDNA Clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ZIP: 19103

Patent No. 5766909
GENERAL INFORMATION:
APPLICANT: Asia, Oiao-wen
APPLICANT: Nathan, Carl F.
APPLICANT: Nathan, Carl F.
APPLICANT: Olao-wen
APPLICANT: Olaycay, Jimmy Ramos
TITLE OF INVENTION: DNA Encoding Inducible Nitric Oxide Synthase
CORRESPONDENCE ADDRESS:
ADDRESSEE: Merck & Co., Inc.
STREET: 126 East Lincoln Avenue

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 5, Application US/08896053
Patent No. 6720309
GENERAL INFORMATION:
APPLICANT: Unanssens, Stefans
APPLICANT: Bloch, Kenneth D.
APPLICANT: Collen, D sir
TITLE OF INVENTION: Treating Pulmonary Hypertension Using Adenoviral-Mediated
TITLE OF INVENTION: Transfer of the Nitric Oxide Synthase Gene
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS: Sterne, Kessler, Goldstein & Fox P.L.L.C.
STREET: 1100 New York Ave., N.W., Suite 600
